

- Abstract Title

Safe and effective nose filler procedure

Nose fillers are the most common cause of blindness.

A safe procedure to prevent blindness

1. Inject the volume of 0.05ml or less per injection.
2. Check that the nose rises as the filler is injected.
3. Compress the dorsal nasal artery with your left hand.

Nose filler know-how

1. Inject the second layer and make it symmetrical.
2. To make the nose higher, filler is injected into the 4th layer as well.
