

Abstract 3

Skin Rejuvenation, Shining with Stellar M22 IPL.

The M22 Stellar incorporates 4 different handpieces, an intense pulsed light handpiece, a nonablative fractional handpiece, a dedicated vascular 1064 nm handpiece, and a Q-switched 1064 nm handpiece. The device features enhancements such as improved handpiece ergonomics, a longer Sapphire Crystal, which improves visibility, and an enhanced graphical user interface. The 9 interchangeable filters allow for treatments ranging from acne to laser hair reduction in darker skin. The ResurFX handpieces allow for nonablative rejuvenation, acne scar treatment and improvement of tone and texture. The vascular handpiece allows for treatment of focal vessels and angiomas, and finally the Q-switched handpiece allows for treatment of some tattoos as well as toning of the skin.
