

Dr. J.Hellman: Evoke – the ultimate hands-free non-surgical device for face and neck remodeling

Abstract:

The Lecture will describe a hands-free device designed for the facial treatment of cheeks and also the horizontal neck to improve laxity and wrinkles. The device is based on the long-time use with scientific evidence of the Forma handpiece.

The goal is to bulk heat the dermis and promote new collagen and elastic fiber synthesis as well as tissue regeneration, resulting in dermal volume augmentation and skin tightening. The Device, like the Forma, is utilizing the concept of A.C.E technology which Acquires a therapeutic temperature, controls the temperature and extends the treatment duration with high safety.

The Cheek and Neck Applicators are designed to enable easy manipulation and to ensure complete and stable contact with the skin for maximal safety and efficacy. Safety features, like the hand-held emergency button are also taken. The device and the treatment protocol from patient selection, pre-treatment, applying the Cheek and Chin Applicators, and suggested treatment parameters are presented. Before and After photos of Dr. Hellman and others are presented and will be discussed.
