For the session "Unlocking the secrets of exosomes: Pioneering advances in aesthetic regeneration using ExoSCRT exosomes":

Exosomes have a significant intrinsic role in the injury, inflammatory, and healing process of the body. In this session, we will review and discuss the most current research in the targeted use of exosomes for enhancing short term wound healing while improving long term clinical results. At the end of the session, attendees will understand where we are today and what the future holds in the role of exosomes for regenerative medicine.

Please let me know if you need anything else.
