

[KOREADERMA 2023 Abstract]

Title: Strategies for contouring of lower face using various methods

Jae-Hong KIM, MD. Ph.D, Educational director of AKDs

Are you afraid to take off your mask?

Wearing a mask has become a daily routine due to the spread of COVID-19.

In Korea, masks have been made mandatory for the past three years.

Recently, as the COVID-19 infection has subsided, many people have begun to take off their masks and return to their daily lives.

Contour treatment of the lower face has long been an important concern, but its importance tends to be overlooked during the three years covered by the mask.

In today's presentation, I'd like to talk about how to create a beautiful lower face contour through proper combination therapy of EBDs and injectables.

In Korea, various ultrasonic and high-frequency radiofrequency equipment are widely used in contour treatment. In addition to injectable treatment such as botulinum toxin and fillers, treatments using new injections are also gaining huge popularity.

It's time to take off your mask and show your beautiful face with confidence.

I hope today's presentation will help you with your procedure of facial contouring.
